

Intended typing sequence

If you want multiple stacks of marks, start stacking on the top side first, and type towards outside. When it's done, work on the bottom side in the same manner, again typing down.

If you want a mark and sarinca, just type the mark and then sarinca.

Discretionary OpenType features

၁၂၃... Numerals with lines: Type Tengwar numbers and apply OpenType ss01 feature

၁၂၃... Rumilian Numerals: Type Tengwar numbers and apply OpenType ss02 feature

≈ ≈ Type double section (≈) and apply OpenType Discretionary Ligature feature (dlig)

Automatic OpenType features

Tehtar can stack in any order and amount. (type letter first, top tehtar second, bottom last)

Simply type 𐌌 or 𐌍 twice. Following the Telcontar 0.0.8, they have no Unicode values.

They take the place of u+E04E or u+E04F.

Hyarmen leans its head to give space to the top tehtar.

Roomen and arda sweeps to the left to give space to the bottom tehtar.

Final sarince ligatures; connects seamlessly to the preceding letter.
